

Receptor-fixed drug pharmacology · same recorded assay per panel

$\alpha 2 \beta 2 \gamma 2$ · human

CHEMBL5143601 / CHEMBL5146041

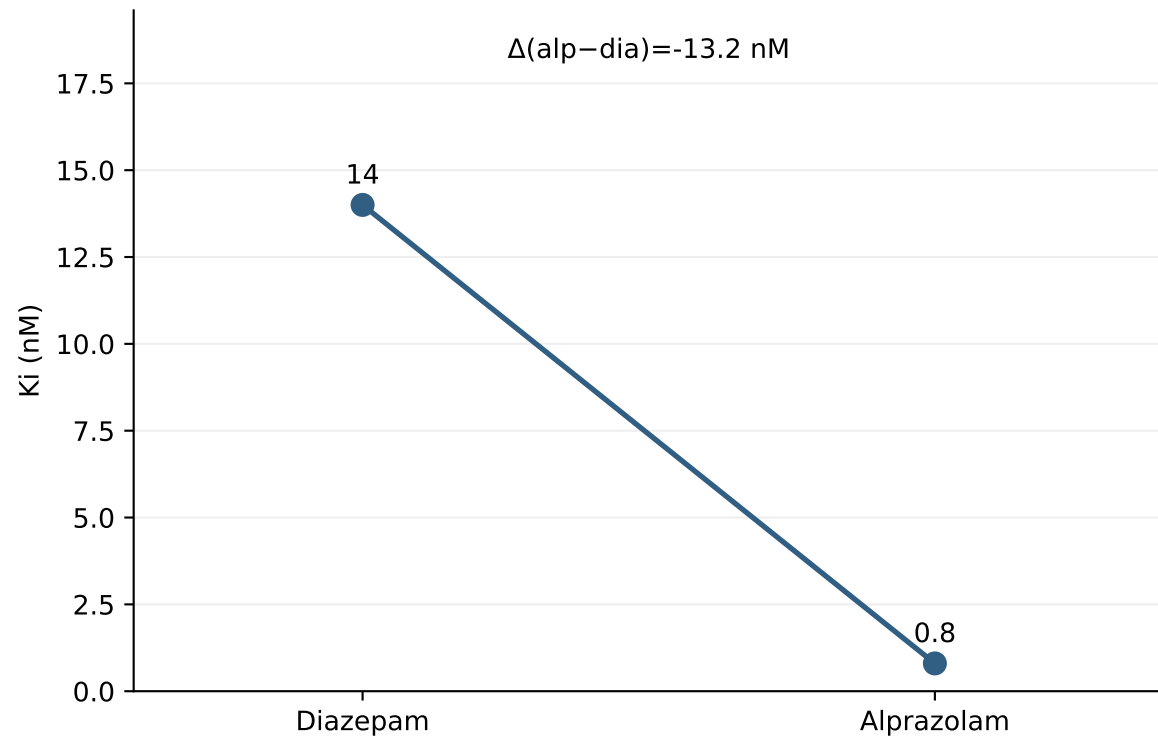

$\Delta(\text{alp} - \text{dia}) = -19.4 \text{ nM}$

$\alpha 1 \beta 2 \gamma 2$ · human

CHEMBL5143601 / CHEMBL5146040

$\Delta(\text{alp} - \text{dia}) = -13.2 \text{ nM}$

Smaller Ki = higher reported binding affinity; no uncertainty estimates or selectivity categories.

Assay-to-assay: exact recorded match. Structure-to-pharmacology: $\beta 2 / \beta 3$ context mismatch.
